HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
The Grim Reaper

The material of choice for these disks are often Ni based superalloys whose compositions and microstructures have to be optimized. Annealing twins, boundaries of lower energy, are often present in these microstructures and play an important role in the in-service properties [TCV16].

Thermodynamics

The kinetics of the triple junction and its sensitivity is acknowledged by the French National Research Agency (ANR) co-financed by SAFRAN and the French National Research Agency (ANR) is acknowledged by the authors.
